

Corporate Branded Solutions

ENVOY WORLD

Innovative companies know that they need to make the most of their resources. EnvoyWorld allows organisations to gain control over, and insight into their employees travel and expenses, while allowing their staff to focus on the real business targets.

ENVOY EXPENSE

Expense eliminates tedious clerical tasks associated with paper forms. Expense ensures complete transparency throughout the claiming and reimbursement process.

Employees have full access to all their previous claims removing the need for printing and storing paper copies.

- Build confidence with users by following known corporate branding
- Ensures the expenses system fits into the corporate intranet
- Focus user's attention on functionality rather than 'look and feel'
- Can be positioned as an 'own build' solution
- Can be modified as corporate image changes

Having taken the decision to improve the way expenses are managed controlled within your organisation, there are decisions to make about how the solution will be rolled into the existing infrastructure.

An increasing number of clients demand 'corporate branding' to be applied to the solutions when they are deployed. There are a number of reasons behind this request, but key amongst these is to offer a level of comfort and familiarity to the new users of the system.

As organisations bring more of their internal intranet online, there is much to be gained from having software that 'fits'.

Premier Envoy can now offer a solution that changes the look and feel of the Expense Management interface that is used by claimants and approvers to fit more closely with your corporate image.

During the implementation, we will liaise with your chosen representative to replicate corporate colours, logos and styles.

For a one off charge, your corporate brand will be designed and maintained throughout the solution's lifecycle.
